

## **Product description of handheld detector**

The main function of the handheld detector is to facilitate the staff to manually detect the classified products such as safety paper. This product has the advantages of high detection sensitivity, light weight, long standby time, accurate detection and positioning, etc.

### **Component function introduction:**

1. **Green indicator**: power indicator. Press the handle button, and the indicator is always on. If regular flashing occurs, the internal battery voltage is low, and the equipment can be charged.
2. **Red indicator**: it is an alarm indicator.
3. **Buzzer (built-in)**: with alarm sound prompt function.
4. **Charging power supply**: it can be charged when the battery voltage is insufficient.
5. **Handle key**: press down to make the equipment in the detection state.

## 6. Introduction to working methods of handheld detector

When the staff wants to detect the target, press the "handle button" with their thumb, and use the detector disc part to detect the target at a short distance. When the target holds secret related products, the red indicator light of the hand-held detector is on, and the buzzer sends out an alarm sound.

### **matters needing attention:**

- 1. In the process of pressing the handle key, the detection disc shall be as far away from the large volume of metal as possible.**
- 2. Avoid filling metal or liquid into the charging interface of the handle.**
